Ideation Phase
Brainstorm & Idea Prioritization Template

Date	23 March 2026
Team ID	**69c0f3744241397902eb6826**
Project Name	Automating Data Import and Relationship Mapping Using Import Sets & Dot Walking
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Step-1: Team Gathering, Collaboration and Select the Problem Statement

🚀 Ideation Phase

🎯 Objective

To design an efficient system that:

- Automates bulk data import into ServiceNow
- Maps relationships between tables using dot walking
- Reduces manual effort and errors
- Improves data accuracy and reporting

💡 Brainstorming Ideas

◈ Core Ideas

1. Automate data import using **Import Sets & Transform Maps**
2. Use **Dot Walking** to establish relationships (e.g., User → Department → Manager)
3. Create validation rules to prevent incorrect data import
4. Build a dashboard to visualize imported data
5. Auto-assign records based on relationships (e.g., assign manager automatically)

◈ Feature Ideas

- 🗁 Upload CSV/Excel files directly through UI
- 🔄 Scheduled automatic imports
- ⚠ Error handling & rejection logs
- 🔗 Auto relationship mapping (User → Manager → Department)
- 📊 Reporting dashboard (import success rate, errors)
- 🔐 Secure login system

◈ Advanced Ideas

- 🤘 AI-based data validation (detect duplicates, anomalies)
- 🔁 Real-time data sync from external systems
- 📧 Email alerts for failed imports
- 📈 Analytics for data quality trends

🧠 Brainstorm Template

Idea ID	Idea Description	Benefits	Feasibility	Impact	Priority
1	Automate Import Sets	Saves time	High	High	☆☆☆☆☆
2	Dot Walking Relationships	Accurate mapping	High	High	☆☆☆☆☆
3	Data Validation Rules	Reduces errors	Medium	High	☆☆☆☆
4	Dashboard UI	Better visibility	Medium	Medium	☆☆☆
5	Scheduled Imports	Fully automated	Medium	High	☆☆☆☆

Idea ID	Idea Description	Benefits	Feasibility	Impact	Priority
6	Error Logs	Easy debugging	High	Medium	☆☆☆☆
7	AI Validation	Smart detection	Low	High	☆☆

📊 Idea Prioritization Matrix

Criteria:

- **Impact** → How valuable is the idea?
- **Feasibility** → How easy to implement?

Category	Description
🔥 High Impact + High Feasibility	Implement immediately
⚙️ High Impact + Low Feasibility	Plan for future
🧪 Low Impact + High Feasibility	Optional
❌ Low Impact + Low Feasibility	Avoid

✅ Final Selected Ideas (Top Priorities)

1. ✓ Automating Import Sets
2. ✓ Dot Walking for Relationship Mapping
3. ✓ Data Validation Rules
4. ✓ Error Logging System
5. ✓ Basic Dashboard

🧩 Problem Statement (Refined)

Manual data import in ServiceNow is time-consuming and error-prone. There is a need for an automated system that efficiently imports data and establishes relationships between tables using dot walking.

🌟 Expected Outcome

- Faster data import process
- Reduced manual errors
- Automated relationship mapping
- Better data visibility via dashboard

Step-2: Brainstorm, Idea Listing and Grouping, Ideation Priortization

🎯 Objective

To generate multiple ideas, organize them logically, and identify the most relevant solution approaches for the project.

🧠 1. Brainstorming Session

🔹 Approach

- Conduct team discussions
- Encourage open idea sharing (no filtering initially)
- Focus on solving the selected problem:
  "Automating Data Import and Relationship Mapping Using Import Sets & Dot Walking"

🔹 Key Focus Areas

- Data Import Automation
- Relationship Mapping
- Error Handling
- User Interface

- Reporting & Monitoring

📝 2. Idea Listing

◈ Generated Ideas

🗁 Data Import Ideas

- Upload CSV/Excel files
- Use Import Sets for staging data
- Create Transform Maps for data conversion
- Schedule automatic imports

🖇 Relationship Mapping Ideas

- Use Dot Walking to link tables
- Map User → Department → Manager
- Auto-fetch reference fields
- Maintain relational integrity

⚠ Error Handling Ideas

- Validate data before import
- Reject invalid records
- Maintain error logs
- Display error messages in UI

🎨 UI/UX Ideas

- Login page with authentication
- Dashboard to view imported data
- Upload interface for files
- Display relationships visually

📊 Reporting Ideas

- Import success rate
- Error count report
- Data summary dashboard
- Logs for tracking imports

🚀 Advanced Ideas

- AI-based duplicate detection
- Email alerts for failures
- Real-time data sync
- Role-based access control

🗂 3. Idea Grouping

🧩 Grouping Based on Categories

Category	Ideas Included
📂 Data Import	CSV upload, Import Sets, Transform Maps, Scheduling
🔗 Relationship Mapping	Dot Walking, Reference mapping, Auto-linking
⚠️ Error Handling	Validation rules, Error logs, Rejected records
🎨 UI/UX	Login page, Dashboard, Upload UI
📊 Reporting	Reports, Analytics, Logs
🚀 Advanced Features	AI validation, Alerts, Automation

🔍 4. Idea Refinement

◈ Selected Key Ideas (Finalized)

- ✓ Import Sets & Transform Maps
- ✓ Dot Walking for relationships
- ✓ Data validation & error handling
- ✓ User-friendly dashboard
- ✓ Reporting system

📌 Outcome of Step-2

- ✓ Multiple ideas generated
- ✓ Ideas categorized into logical groups
- ✓ Best ideas shortlisted
- ✓ Clear direction for project development
