Project Design Phase
Problem – Solution Fit Template

Date	23 March 2026
Team ID	69c0f3744241397902eb6826
Project Name	Automating Data Import and Relationship Mapping Using Import Sets & Dot Walking
Maximum Marks	2 Marks

📄 Problem – Solution Fit Template

◈ Purpose

The **Problem–Solution Fit Template** is used to:

- Identify **real customer problems**
- Understand **user behavior and needs**
- Analyze **existing solutions and gaps**
- Design a **solution that fits the problem perfectly**

👉 In simple words:

> **"Right Problem + Right Solution = Successful Product"**

◈ Template Explanation (Section-wise)

1. Customer Segment (CS)

👤 *Who is your customer?*

- Define target users (e.g., Admins, IT teams, HR users)
- Understand their needs and characteristics

2. Jobs-To-Be-Done / Problems (JBP)

🎯 *What problems are customers facing?*

- Manual data import
- Time-consuming processes

- Difficulty in mapping relationships

3. Triggers (TR)

⚡ *What makes users look for a solution?*

- Increase in data volume
- Frequent errors in manual work
- Need for automation

4. Emotions (EM)

😊😟 *How do users feel?*

- Before: Frustrated, stressed
- After: Satisfied, confident

5. Available Solutions (AS)

🔍 *What solutions already exist?*

- Manual Excel processing
- Basic import tools
- Limited automation systems

6. Customer Constraints (CC)

🚫 *What limits the customer?*

- Lack of technical skills
- Time constraints
- Budget limitations

7. Behaviour (BE)

📊 *How do users currently act?*

- Manually upload and edit data

- Spend time fixing errors
- Use multiple tools

8. Channels of Behaviour (CH)

🌐 *Where do users interact?*

- Online: Web apps, dashboards
- Offline: Manual records, Excel sheets

9. Problem Root Cause (RC)

🔎 *Why does the problem exist?*

- No automation
- Poor integration between systems
- Lack of proper mapping tools

10. Your Solution (SL)

💡 *How will you solve the problem?*

- Use **Import Sets** for data import
- Use **Transform Maps** for mapping
- Use **Dot Walking** for relationships
- Automate the entire workflow

1. CUSTOMER SEGMENT(S) — CS

- IT administrators, data mangers, HR/asset managers
- Organizations for the organization

6. CUSTOMER CONSTRAINTS — CC

- Lack of technical expertise, limtoradet for automaction tools
- Time constraints due to large data volumes (egot)

5. AVAILABLE SOLUTIONS — AS

- Manual data entry (Excel/CSV/M) import for automation
- Basic import tools (limited automation, *muwihy (Sast 30S)*
- Custom scripts (inielly, hard to maintain)

2. JOBS-TO-BE-DONE/ PROBLEMS — J&P

- Manual data import is slow and error-prone
- Mapping relationships between data records is labor-intensive & inconsistent.
- Maintaining data consistency is challenging
- Difficulty linking user-Company-Asset records

9. PROBLEM ROOT CAUSE — RC

- Manual and error-prone nature ture of data import and lacsd I tinensive.
- Lack of automation in data processing
- Difficulty in dynamically linking related tables

7. BEHAVIOUR — BE

- Manually uplooad and import data using Excel/CSV
- Spend hours fixing errors and inconsistencies
- Repeatedly cross-reference tables and tools to Limkink related records. Spend too much time on repetitive iata

3. TRIGGERS — TR

- Increase in data volume to be processed
- Frequent errors in data leading to operational issues
- Realizing the inefficiency of manual processes

10. YOUR SOLUTION — SL

Automate process using ServiceNow

- Load data from CSV, Excel, APIs, into staging tables
- **Import Sets** (Convert/mapt data into target tables
- **Transform Maps** (Automate, relationship linking via Diot
- **Business Rules** 'Automates validation and processing

7. BEHAVIOUR — BE

- Load data from CSV, Excel, APIs into staging tables
- Spend hours fixing errors and inconsistencies
- Repeatedly cross-reference tables and tools to link related
- records. spend too much time on repeitive data tasks

3. TRIGGERS — TR

- Increase in data volume i to processed
- Frequent errors in data leading to operational issues
- Realizing the inefficiency of manual processes

4. EMOTIONS: BEFORE / AFTER — EM

- Frustrated, stresces (errors 4 data management chasos.)
- Satisfied, confident, accurate, automated, efficient, processeS

10. YOUR SOLUTION — SL

Automate the process using ServiceNow:

- Load data from CSV, Excel, APIs into staging tables
- **Transform Maps** (Convert/map data into target tables
- Business Rules 'Automate validation and processing
- Business Rules (Automate automate, resattement-mationsIS)
- Foor management chaos. Satisfied, confident, efficient processes

8. CHANNELS of BEHAVIOUR — CH

8.1 ONLINE

- Import data through web dashboards
- Seeking solutions in forums and Serviceor5 | ow communities

8.2 OFFLINE

- Manually processing data in CSV,/Excel files
- Handling data requests via email
