Project Design Phase
Solution Architecture

Date	30 March 2026
Team ID	69c0f3744241397902eb6826
Project Name	Automating Data Import and Relationship Mapping Using Import Sets & Dot Walking
Maximum Marks	4 Marks

Solution Architecture

Solution Architecture is a **high-level design** that shows **how different components of a system work together** to solve a specific problem.

👉 In simple words:
"It is a blueprint of your project showing tools, flow, and how everything connects."

◈ Key Elements of Solution Architecture

1. **Components**
   - Different parts of the system (UI, database, APIs, etc.)
2. **Data Flow**
   - How data moves from one component to another
3. **Technologies Used**
   - Tools/platforms (e.g., ServiceNow, APIs, databases)
4. **Integration**
   - How external systems connect with your solution
5. **Processing Logic**

- How data is transformed, validated, and stored

◈ Example (Based on Your Project)

🏗 Solution Architecture Flow

External Data (CSV / Excel / API)
↓
Import Sets (Staging Table)
↓
Transform Maps (Data Processing)
↓
Dot Walking (Relationship Mapping)
↓
Target Tables (User, Company, Asset)
↓
Reports / Dashboard

◈ Explanation

- **Input Layer** → External data sources
- **Processing Layer** → Import Sets + Transform Maps
- **Logic Layer** → Dot Walking + Business Rules
- **Data Layer** → ServiceNow Tables
- **Output Layer** → Reports & dashboards
